DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to a method for dissolving or disaggregating a polypeptide, classified in class 436, subclass 86.
 - II. Claims 8-12, drawn to a method for storing monomeric peptide, classified in class436, subclass 176.
 - III. Claims 13-20, 27-29, drawn to a method for making an aggregate of aggregation-prone polypeptides, classified in class 435, subclass 40.5.
 - IV. Claims 21-26, drawn to an invitro produced aggregates, classified in class 435, subclass 70.1.
 - V. Claims 30-43, drawn to an assay for determining the extension of polyglutamine aggregates, classified in class 436, subclass 523.
 - VI. Claims 44-49, drawn to a method for determining the capacity of a chemical compound to inhibit the formation of polyglutamine aggregates, classified in class 436, subclass 55.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-III, V-VI are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the feature of a mixture of combining TFA and HFIP chemicals in group I, is not required by the claims of other groups. The feature of storing the peptides at a temperature of – 50C in group II, is not required by the claims of other groups. The feature of freezing the aggregation-prone polypeptides and incubating the frozen polypeptides in a frozen state in group III, is not required by the claims of other groups. The feature of adding labeled monomeric polyglutamine peptides to fixed polyglutamine aggregates in group V, is not required by the claims of other groups. The feature of exposing a test chemical to the polyglutamine polypetides in group VI, is not required by the claims of other groups. Therefore, each group has different modes, functions and effects. Thus, group I-III, V-VI are patentably distinct and independent.

Art Unit: 1641

3. Inventions IV and I-III, V-VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product produced by group IV can be used in a materially different process, such as purification or isolation.

- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the search required for one group is not required for the other, restriction for examination purposes as indicated is proper.
- 5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacob Cheu whose telephone number is 571-282-0814. The examiner can normally be reached on 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on 571-272-0823. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
